Building T 39
Naval Receiving Station
Anacostia, Virginia

Dear Bill:

You asked me about some possible sources of interest in bandwidth reduction for video transmission. John Tukey thinks very highly of Dr. E.E. David, Director of Visual and Acoustic Research at Bell Laboratories, Murray Hill, in this connection.

I am enclosing what I had in the back of my mind about velocity modulation. I think what Hanel was discussing would be very similar to the velocity modulation of a derivative signal, but I may be missing something.

Yours sincerely,

Joshua Lederberg
Professor of Genetics
